Vol. 136 No. 47 ♦ Groton, South Dakota ♦ Wednesday, July 17, 2019 ♦ Established in 1889

Council debates Washington St. drainage issue

Paul Eckrich came before the council and asked to make sure his driveway is dry with all of the construction going on the street on Washington St. And Sixth Avenue. Mayor Scott Hanlon told the council that he and Terry Herron had talked with Ken Hier of Clark Engineering to discuss options. It would cost an additional \$1,600 to make the necessary changes for drainage. Councilman Jay Peterson said that he is perplexed about the whole situation, sitting that there is also drainage issues on the east side of the street. "We paid them to fix the drainage," Peterson said. "I'm reluctant to throw more money into it without knowing all of the drainage issues are taken care of." He said that he had talked with Jeff Stolle who asked why there was work being done on the west side of the street and not on the east side. "Now is the time to get it right," Peterson said.

The council authorized a payment request for \$43,715.18 to H.F. Jacobs & Son Construction for work completed to date. Also, an extension was given for completion of the project which was approved for September 15, 2019, due to the rain.

The council rescinded the resolution to not install the east-west stop signs on Washington Street and West Fifth Avenue. It passed, 3-1 with Councilman David Blackmun voting no.

The council accepted the resignation of Damian Bahr as police officer with July 16 being his final date.

WEB Water has notified the city that the city's usage rate will increase by 20 cents per one-thousand gallons. The council will review passing on any rate increase to the September meeting.

Beer and wine will be allowed for a private party at the swimming pool on July 19th was approved by the council. The renters will also be responsible for clean-up.

After a short executive session, the council hired Lee Iverson as a grounds keeper. Also, David Hunter was hired as a temporary police officer until the full time position is filled. His wage will be what he made when he resigned.

Is It Fake News?

It is miraculous to consider how much access and exposure we have to information through our

computers, televisions, radios and newspapers. Unfortunately, we need to be on guard because too much of this buzz can be false information.

In an October 2017 article, the Pew Research Center found 43 percent of people in 2016 received their news from Facebook listening for information that aligned with their world view (not necessarily with facts). Pew also found 23 percent had shared, by intention or accident, untrue political messages on social media. We need to be more critical of all sources of information around us. Almost as malignant as fake news are advertisements that pretend to be factually based.

Of course, marketing (sales) can be good and important as it moves commerce, and I'm not saying industry doesn't sponsor credible scientific research. However, marketing can be harmful when selling a weight-loss program that gives false hope, when peddling virility pills that are ineffective or when pushing an outrageously expensive drug that should be used only after first-line medicines are tried. Advertisements can and should be based on truth, but my cynical side sees the words "truth in advertising" as an oxymoron, like "seriously funny," "awfully good" or "found missing." Indeed, marketing motives can be as different from evidence-based science as corn syrup is to leafy green vegetables.

It has been our desire and goal at Healing Words Foundation to find and help spread health information that is not influenced by marketing or sales. What is known today as Prairie Doc® media started in the 1980s with newspaper articles, expanding in the 1990s with a local talk AM-radio show, in 2003 with a television show and in 2010 with social media. Prairie Doc® has been made possible with the help of volunteer physicians and experts, South Dakota State University and its students, our paid and voluntary Prairie Doc® production staff, our Foundation Board of Directors and, most importantly, the unrestricted underwriting of organizations and individuals like you. We feel blessed to have such wonderful talents and gifts allowing us to bring our unbiased and credible public health information to the people.

The mission statement of the Healing Words Foundation and all Prairie Doc® programming is enhancing health and diminishing suffering by communicating useful information, based on honest science, provided in a respectful and compassionate manner.

This is a call for all of us to be careful and critical. We don't have to be influenced by fake news but rather need to choose our sources of information carefully. Let this be a time of truth.

Prairie Doc® on Facebook, Instagram and Twitter featuring On Call with the Prairie Doc® a medical Q&A show streaming on Facebook and broadcast on SDPTV most Thursdays at 7 p.m. central.

Is the Groton Swimming Pool a 10-year or 20-year opt-out?

Believe it or not, you would think this was an easy question. But due to confusion in documents, it is not quite so easy to figure out.

Yes, the plan at the time was for a 10-year opt-out of \$130,000.

In the February 4, 2008 minutes, Resolution 8-24 stated: We therefore OPT OUT of such tax limitation in the amount of \$130,000 for the calendar year 2008-2028 taxes payable in the calendar year 2009-2029.

That same sentence was posted on the Notice of Election and was also put on the ballot.

Even though the resolution was not referred to a vote, the council decided to send the matter to the city voters any way.

Now the confusion arises when the city council had a special meeting on April 9, 2008 to canvass the ballot (which stated for years 2008-2028). In the last minute of the special meeting, it was stated that the Opt Out for Swimming Pool Funding was for \$130,000 for 10 years. In fact, news articles printed in the Groton Independent also had the opt-out for 10 years. But that's not what the voters voted on.

Now, when the letter from then finance officer Anita Lowary is sent to the Brown County Auditor, Maxine Taylor, you will notice that it has written 10 years. However, someone crossed out 10 and wrote 20 years is in place.

According to Lowary, "The 20 year time period was on all the original documents. When the time came to do the financing, the Council accepted the 10 year proposal (which you will notice in the canvassing minutes). The City was told that we could accept a lesser time for finance, but we could not lengthen the original time. Since the 10 year period was accepted, the opt out was set to close with the 2018 taxes."

Thanks to Sara Swisher, Chief Deputy Auditor, for supplying the Independent with the documents on this issue. Swisher said, "Unfortunately, I wasn't here in the office when this opt out took place but from the documentation that we have on file (see attached), which was also sent to Department of Revenue, the opt out is for 20 years.

As you can see in the documents that one publication says 20 yrs and another says 10 yrs, but the ballot that was provided to the voters was for the 20 years and the resolution adopted was for 20 years as well. Our records are indicating that this opt out will run for 20 years 2027 payable 2028."

Dear Maxine:

Enclosed please find the affidavits of publication for our Opt Out of \$130,000 to pay for our swimming pool. Although it was not referred to the voters, our City Council chose to have an election to confirm the support for this project. We had a 39.6% voter turn out at the April 8 election and it passed at over 2 to 1 in favor.

If there are any other records you need for your file on this opt out, please feel free to contact me.

Sincerely,

Anita Lowary
Anita Lowary
Finance Officer

OFFICIAL TAX LEVY OPT-OUT ELECTION BALLOT GROTON, SOUTH DAKOTA April 8, 2008

The following tax levy opt-out was passed by the governing body and submitted to the voters. The tax levy opt-out will not become effective unless approved by majority vote.

IN THE AMOUNT OF \$130,000 FOR THE
CALENDAR YEAR 2008-2028 TAXES PAYABLE
IN THE CALENDAR YEAR 2009-2029.

To vote use a cross (X) or check mark (✓) in the square in front of "Yes" or "No".

YES A vote "Yes" will increase the tax levy by the amount of the opt-out.

NO A vote "No" will leave the tax levy as it is without the amount of the opt-out.

April 9, 2008

The Groton City Council met on the above date at City Hall at 7:00 p.m. for special meeting to canvass the election — with the following members present: Heitmann, Brotherton, Hendrickson, Nyberg, Hamilton, Anderson, and Mayor Olson presiding.

The April 8, 2008 election was canvassed and following results were accepted on a motion by Anderson and seconded by Nyberg. All members present voted aye.

Opt Out for Swimming Pool Funding - \$130,000 for ten years

Yes - 260

No - 124

Rejected Ballot - 1

Meeting adjourned.

Roy L. Olson, Mayor

Anita Lowary, Finance Officer

10 years?

from the Feb 4, 2008 Minutes

installation of this curb and gutter.

Such special assessment shall be payable in ten (10) equal annual installments in accordance with the accepted bid and cost incurred, and the said assessment and installments shall be payable under Plan 2, "Collection by the Municipal Treasurer" as provided by SDCL 9-43.

Section 3. The estimated linear foot cost of said curb and gutter is \$33.00.

Discussion was held on the swimming pool funding for different terms and funding sources. A bond or lease purchase with sales tax repayment would still require an Opt Out from the property tax freeze of \$130,000 for ten years. Moved by Hamilton and seconded by Nyberg to pass the following resolution and put it on the municipal election ballot. All members present

Resolution 8-24 RESOLUTION TO OPT OUT OF TAX LIMITATION

The Governing Board of the City of Groton does state that the City of Groton is unable to operate under the tax limitation measure currently in statute. We therefore OPT OUT of such tax limitation in the amount of \$130,000 for the calendar year 2008-2028 taxes payable in the calendar year 2009-2029. This action has been taken by the board and approved by at least a two thirds vote of the board.

20 years

A vote on this question will be held at the municipal election April 8, 2008. Upon passage of this measure, this resolution authorizes the county auditor to spread an excess levy to raise tax dollars in the above state amount.

Discussion was held on replacing the police vehicle. Moved by Anderson and seconded by Heitmann to bid the police vehicle on March 17. All members present voted aye.

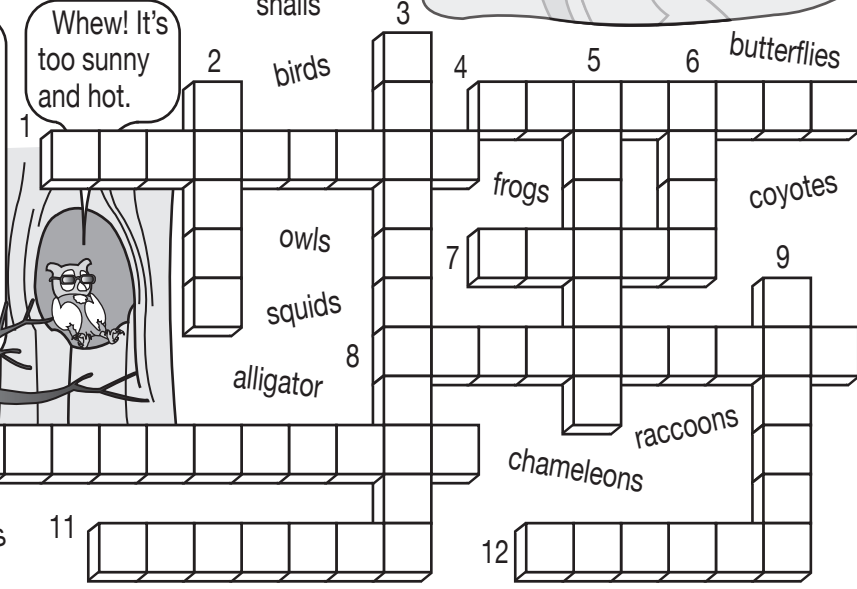

1 What's Hiding All Around Us?

 a spun

I live by the ocean. When birds swoop too near or people's feet come too close, I quickly bury myself in the mud. You may see a tiny ripple and some air bubbles in the sand where I have "disappeared."

When you scurry through woods or fields, near ponds or in your own yard, you miss many creatures of nature. Try walking very slowly. Creep at a snail's pace. If you are very quiet, you will have many surprises. Living things are hiding all around you!

Whew! It's too sunny and hot.

Read the clues to fill in the BIG crossword:

1. has a stiff back and dark coloring – looks like a floating log in the swamp
2. these babies in a nest are often the same color as twigs and branches: brown, striped, spotted
3. gila _____ hide in saguaro cacti to stay out of the heat (New Mexico) and keep safe from coyotes, hawks, snakes
4. hide in base of hollowed out trees to keep out of sight from bobcats, coyotes while sleeping all day
5. brown fur lets them hide in fields and sneak up on prey
6. stay hidden in trees; sleep until sunset, then fly and hunt for food
7. tree _____ hide from birds, snakes; green skin blends with leaves, pond scum, lily pads
8. live in trees; can change color to match the green or brown leaves they are on
9. have shells to protect their soft bodies; pull back inside their shells to escape danger
10. may blend in with flowers or dead leaves so that hungry birds pass by them
11. hide in mud; only eyes and nostrils show; shells can look like a rocks in the water
12. boneless sea creatures; change their skin color or patterns; squirt 'ink' to escape

If you are a good "detective" you may be able to see signs that an animal has been in an area. Here are 6 "signs" that animals may leave behind. How many of these have you seen? **Look at them carefully to fill in the crossword puzzle.**

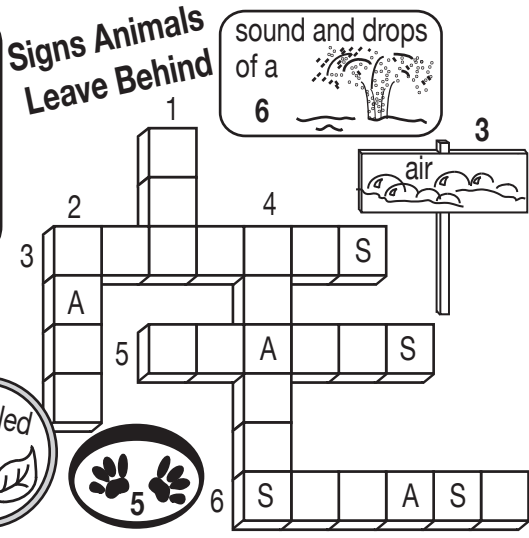

Signs Animals Leave Behind

sound and drops of a _____

air _____

nibbled _____

How Do Animals Hide?

I had to run away quickly to keep from being eaten, but Mother Nature has wisely given her creatures many ways to protect themselves.

- Some animals:
- puff up to appear larger
 - play "dead"
 - blend into the tall grasses or snow
 - taste bad or are poisonous
 - run swiftly or leap great distances
 - use "false eyes" which are not eyes at all, but look like them

I can fly away or hide if I need to. I also taste awful to birds and animals.

You smell funny too!

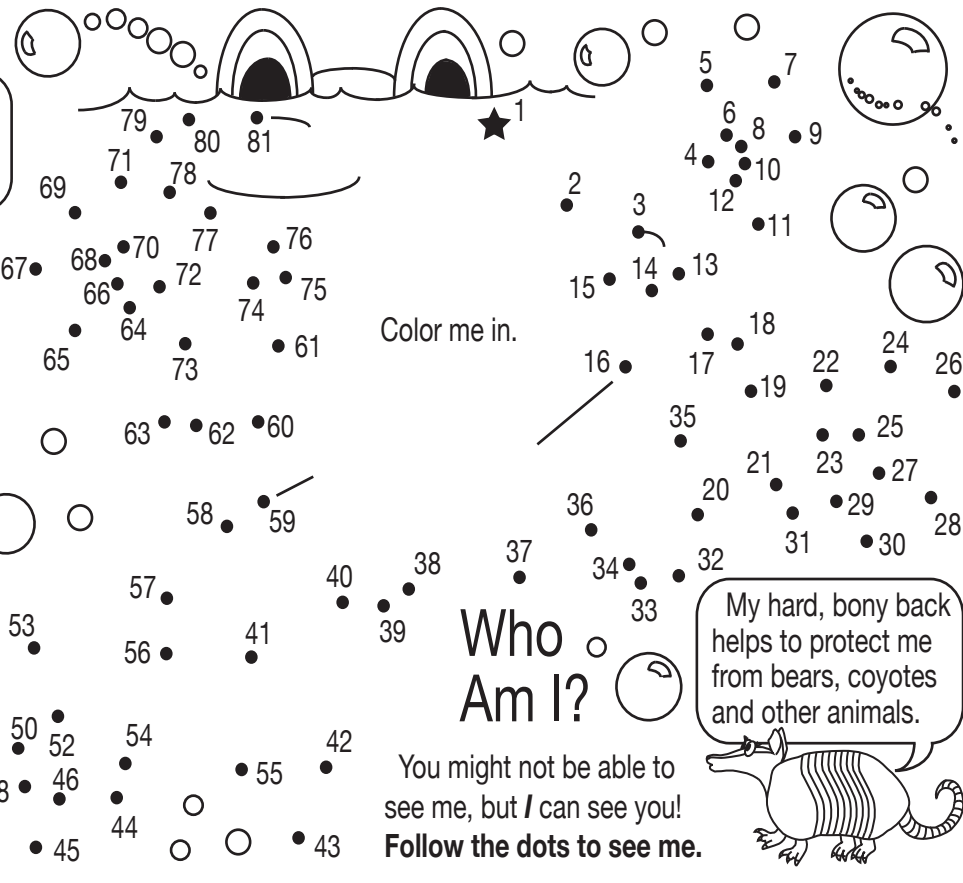

Color me in.

Who Am I?

My hard, bony back helps to protect me from bears, coyotes and other animals.

You might not be able to see me, but I can see you!

Follow the dots to see me.

Can you match each insect below to one way it protects itself?

(Hint: Use each of the answers twice.)

1. ladybird beetle (lady bug)
2. bee
3. caterpillar of the swallowtail butterfly
4. wasp
5. monarch butterfly
6. cecropia silkworm moth

- A. scares with false 'eyes'
- B. tastes bad
- C. stings

Can You See Us?

I'm eating my lunch in this cool, moist spot. Follow the color key to color in the puzzle to see me:

- G = Green
- Y = Yellow
- B = Brown

I am a _____.

You might spot me at the oceanside or in your own garden! My body is long and moist and I leave slime wherever I go. I have to watch out for snakes, turtles, toads and birds too. When I am threatened I pull back into my nice hard shell. I don't like a lot of sun and heat. When it is too hot, I seal off the entrance to my shell to keep from drying too much.

Can you see me? I am an _____.

State officials scramble to respond after zebra mussels found in Lake Sharpe

By: Nick Lowrey

Lake Sharpe has become the second major Missouri River reservoir in South Dakota to be infested with invasive zebra mussels, raising fears that millions of dollars in mitigation may be needed and that new restrictions could be placed on those who use the lake for boating, fishing and recreation.

The infestation was announced in a news release from the state Game, Fish & Parks Department on July 12. The mussel discovery shocked state GFP officials and came in spite of more than four years of work and \$400,000 in spending aimed at preventing boaters from inadvertently spreading zebra mussels and a host of other harmful, non-native species from spreading further into South Dakota.

On July 13, GFP Chief of Aquatic Resources John Lott told South Dakota News Watch that senior GFP staff plan to meet soon to begin reevaluating how the state handles aquatic invasive species management.

South Dakota faces staggering mitigation and repair bills as a result of zebra mussel infestations. Little can be done to reverse the infestation in Lake Sharpe, which is located on the Missouri River between Pierre and Fort Thompson. There is no known way to completely remove zebra mussels from a lake without either draining it or using poison to eradicate the mussels, which is not an option for a river-based waterway.

"We'll be recommending regulation changes at the [GFP] commission meeting in September," Lott said, though he did not provide any specific potential rule changes.

For now, the rules have not changed for boaters using Lake Sharpe, Lott said. Still, he wanted to remind the public that the only way for mussels to move from lake to lake is if people accidentally carry them in or on their boats.

Zebra mussels, native to Eastern Europe, have been the bane of waterway managers and users across the country.

South Dakota already faces steep mitigation and repair bills on public waterways and related infrastructure as a result of ongoing zebra mussel infestations, including at Lewis and Clark Lake on the Missouri River near Yankton.

The mussels can clog or damage water treatment and power-generation systems on lakes and rivers. When the mussels have been in a water body long enough, the sharp shells of dead mussels start to accumulate on beaches, fouling recreation access points and potentially cutting the feet of users. When water levels are drawn down, massive mussel die-offs release strong odors. The mussels can darken lake waters and make fishing more difficult. So far, zebra mussel infestations haven't been found to destroy fisheries, but the potential does exist, Lott said.

Mussel mitigation a costly process

A January 2019 report by the University of Montana gave a glimpse of what an expanded zebra mussel infestation could cost South Dakota.

A study done at the university's Flathead Lake Biological Station estimated the potential yearly cost of zebra mussel infestation solely to irrigation systems along Montana's portion of the Missouri River at \$25 million to \$53 million. The potential cost of mussel removal and mitigation at water treatment plants was estimated at up to \$5.8 million, the study found. A similar report does not exist for South Dakota

Invasive zebra mussels have been found in Lake Sharpe on the Missouri River in South Dakota, shocking state officials and creating potential for waterway damage, problems with power and water plants and more restrictions on boaters.

but many farmers, ranchers, cities and rural water systems draw water from the state's portion of the Missouri River. Costs to the state and potentially to private landowners increase if mussels spread to new lakes and rivers.

Zebra mussels cause damage by attaching themselves to nearly any hard surface in the water. Juvenile zebra mussels, which are known as veligers, are nearly microscopic and float free in the water for about a month. During that month they can be sucked into boat ballast tanks, live wells and motors, which is how they move from lake to lake. Not only does that allow zebra mussels to spread easily, it also means they can get into some pretty surprising places. Zebra mussels also tend to form colonies which can clog intake and out-flow pipes at water treatment facilities.

Lewis and Clark Lake, the first Missouri River reservoir in South Dakota where a zebra mussel infestation was found, has suffered extensive damage and hefty repair bills. At Gavins Point Dam, which forms the reservoir, the U.S. Army Corps of Engineers had to reduce the amount of electricity the hydroelectric dam produces in order to clean mussels out of generator cooling tank water intakes every two weeks, officials said. Prior to the zebra mussel invasion, the intakes were cleaned about every six months.

"They'll attach to piping. If it's really small piping they'll completely block it up, stop the flow through it. They reduce the amount of flow through the system, they can completely block the heat exchangers or reduce the flows, which of course starts to make our unit temperatures creep up, forcing us to shut a generator down to clean it out," Gavins Point Dam senior mechanic Michael Schnetzer said in a June news release announcing a new anti-mussel water filtration system.

The filtration system the corps announced in June cost about \$1.45 million and works by bombarding free-floating juvenile zebra mussels with a powerful UV light, which kills them.

The first discovery of zebra mussels in the U.S. was made in 1988 in the Great Lakes. Within a few years, nearly every submerged surface in the Great Lakes was covered in the mussels. Since being discovered in the U.S., zebra mussels have spread outward through the country by way of river currents and in boat ballast tanks, live wells and motors.

The first confirmed discovery of zebra mussels in South Dakota occurred in 2015 at Lewis

and Clark Lake on the Missouri River near Yankton. They have since been found in Lake Yankton, which is just outside of Yankton, in McCook Lake in Union County near North Sioux City and in the Missouri River below Gavin's Point Dam. Lake Sharpe is the newest addition to the list of infested South Dakota waters.

GFP Commission Chairman Gary Jensen said he is concerned about the potential for damage and repair costs to Lake Sharpe and is working to schedule an emergency commission meeting to form a response.

His goal for the meeting was to get a more detailed report on the Lake Sharpe situation and determine what, if any, mitigation steps can be taken.

"We've been trying to prevent this from happening since I started on the commission," said Jensen, a commissioner for about a decade.

The first adult zebra mussels found in Lake Sharpe were discovered recently by U.S. Army Corps of Engineers staff members doing maintenance on Big Bend Dam, which forms the lake at Fort Thompson. It is impossible to know exactly how the mussels got there, but the most likely scenario is that juvenile zebra mussels were carried into the lake by a boater.

So far, adult mussels have only been found on structures close to the dam. GFP staff will be working to determine the full extent of the infestation in the coming days, Lott said. They will also monitor Lake Francis Case, which is immediately downstream of Lake Sharpe, for signs of zebra mussel infestation. Lake Oahe, which is immediately upstream of Lake Sharpe, also will see more monitoring for mussels, Lott said.

Little can be done to immediately reverse the infestation in Lake Sharpe since there is no known way to completely remove zebra mussels from a lake without either draining it or using poison to eradicate the mussels, which is not an option for a river-based waterway.

However, the GFP commission can strengthen state anti-aquatic invasive species rules and step up enforcement among boaters and recreational users to prevent or slow the further spread of zebra mussels. The commission also could declare Lake Sharpe an invasive species containment water, a designation that carries

A pair of South Dakota conservation officers inspect Pierre resident Jeff Carr's boat July 14 as part of a temporary law enforcement check station near Oahe Dam a few miles north of Pierre. Carr had been fishing on Lake Oahe and officers checked to make sure the boat's drain plug was out, which is required under the state's aquatic invasive species rules. Regional Conservation Officer Supervisor Steve Rossow said enforcement of the rules has taken on new urgency as Lake Sharpe, immediately downstream from Lake Oahe, was confirmed to be infested with invasive zebra mussels on July 12. Photo: Nick Lowrey, South Dakota News Watch.

Zebra mussels are generally small and can be identified by the distinctive stripes on their shells. If not contained, zebra mussels reproduce quickly and can damage waterways and boats and clog water treatment facilities and power plants. Photo: Courtesy U.S. Geological Survey

a set of additional significant restrictions on boat movement and cleanliness.

"There are still a lot of water bodies out there to be protected," Jensen said.

New boating rules and enforcement likely

The state's current invasive species rules first were written in 2015 following the discovery of zebra mussels in Lewis and Clark Lake. The rules were updated again in 2017. Boat owners are required to pull their boats' drain plugs before leaving a boat ramp parking lot. Boaters and anglers also are not allowed to transport lake water past a boat ramp parking lot. Any boat launched into a lake or river designated by the GFP Commission as an invasive species containment water and that can't be completely dried out by pulling a drain plug must be decontaminated by cleaning the boat's hull with 140-degree water and flushing its internal compartments with 120-degree water.

Right now, there are four invasive species containment waters in South Dakota, making up the only waterways other than Lake Sharpe where zebra mussels have been found in the state. The containment waters are Lewis and Clark Lake, the Missouri River below Gavins Point Dam, Lake Yankton and McCook Lake near North Sioux City.

Any boat that has been used on an out of state lake or river known to have invasive mussels also must be decontaminated before it can be launched in South Dakota. GFP staff can inspect boats for compliance with the rules but, so far, most enforcement efforts have been focused around Lewis and Clark Lake.

Jensen wouldn't say whether he thought the state's current approach toward invasive species control had been aggressive enough.

He also couldn't offer any details on changes that might be in the works but he did say that he wanted to move as quickly as possible. Any rule changes the commission chooses to make would be subject to a 30-day public comment period and a public hearing.

Rick Jorgensen, a boater from Fort Pierre who spent a recent afternoon cruising up and down Lake Sharpe with friends, wasn't happy to hear about the zebra mussel infestation.

"Now that they're here we've got a real problem," Jorgensen said.

He said he was frustrated at the inability of state officials to keep a closer eye on all the boats coming into South Dakota from Minnesota and Iowa where there are dozens of lakes infested with zebra mussels.

"I don't think GFP has enough people to do anything about it," Jorgensen said.

At least part of the urgency from GFP officials has to do with the popularity of Lake Sharpe and its downstream neighbor, Lake Francis Case. Lake Francis Case likely will be infested with zebra mussels soon, if it isn't already, because juvenile zebra mussels will be sucked through Big Bend Dam. Lake Francis

Case is crossed by Interstate 90, making it an easy destination for anglers and boaters from Rapid City or Sioux Falls to make weekend visits.

"When you look at a state like ours and how mobile our boaters and anglers are, it can be really hard to control the spread of aquatic invasive species," Lott said.

A big part of GFP's job over the next few months will be to convince boaters, anglers, cities and irrigators to start working together on efforts to prevent zebra mussels from spreading any further. The only way the invasive mussels can move past a dam or to another lake is if someone inadvertently carries them, Lott said.

"We need to get people to think about how aquatic invasive species impact them directly," Lott said.

Paul Lepisto, an angler and boat owner from Pierre, said the discovery of zebra mussels was a "gut punch." Lepisto, who is the regional conservation director for the Izaak Walton League, has been working on the invasive species issue for 11 years. He said he thought GFP's approach to the issue had been sensible.

"I thought the message would have sunk in; we can't recreate the way we used to," Lepisto said.

Lake Sharpe, shown here from the beach at Griffin Park in Pierre, is one of South Dakota's most popular fishing and recreation destinations. The popularity and prominence of the Missouri River reservoir is one reason the Game, Fish & Parks Department is worried about the recent discovery of invasive zebra mussels in the lake. Photo: Nick Lowrey, South Dakota

News Watch

Rapid reproduction and vast movement

Zebra mussels are actually native to the Caspian Sea region of eastern Europe.

The mussels spread through Europe's growing canal system during the 1800s and 1900s. Eventually they made their way to busy, freshwater ports that often saw ocean-going ships. Those ships picked up juvenile zebra mussels, which are known as veligers, as they pumped water into their ballast tanks before making their way across the Atlantic Ocean.

A few of those ships went through the St. Lawrence Seaway system, which connects the Atlantic Ocean to the Great Lakes. At some point along their journey through the Great Lakes, transatlantic ships carrying zebra mussels dumped their ballast tanks and almost immediately, the Great Lakes became infested.

Zebra mussels are small, filter feeding mussels that latch onto hard surfaces in infested lakes.

They grow fast and reproduce by broadcasting reproductive cells into the water. A single female can release up to 40,000 eggs during a spawning cycle and up to 1 million eggs during a summer spawning season.

Juvenile zebra mussels are nearly microscopic and float free in the water for about a month. They can be sucked into boat ballast tanks, live wells and motors. After about three weeks in the water, the veligers find something to latch onto, grow a shell and enter their adult stage of life. Zebra mussel colonies have been found on everything from golf balls to live turtles. Once attached to something, it takes a female about two years to start reproducing.

Rick Jorgensen of Fort Pierre said he keeps his pontoon on the water all summer at a dock on Lake Sharpe near his home. He said he's tried to follow the zebra mussel issue and doesn't think the discovery of the destructive mussels will affect him too much

but he was disappointed to learn of the recent discovery. Photo: Nick Lowrey, South Dakota

News Watch

"Now that they're here, we've got a real problem."

-- Fort Pierre boater Rick Jorgensen

Zebra mussels feed by filtering water and collecting algae in their siphons. Algae are the base of most aquatic food webs, so there's some worry that zebra mussels, which have few natural predators in North America, can cause irreparable harm to fisheries. While scientists worry zebra mussels can compete with native species that rely on algae, and thus alter food webs, it hasn't happened yet.

The mussels can and do alter water clarity which can encourage the growth of aquatic plants and make fishing more difficult.

By far, the biggest danger zebra mussels pose is to infrastructure. National estimates peg the annual cost of mitigation, repairs and education about invasive mussels at about \$1 billion.

The South Dakota Game Fish & Parks Department has placed signs at public boat ramps across the state as a visible reminder of the rules against moving lake water and making sure all drain plugs on boats are open when leaving a lake. Restrictions on boating in the Missouri River could be tightened now that invasive zebra mussels have been discovered in Lake Sharpe. Photo: Nick Lowrey,

Low Water Pressure

The City of Groton experienced low water pressure late Saturday afternoon/early evening. The controls for the water tower malfunctioned which also affected the alert system. Residents started to alert the public works employees about the problem. Basically, the water tower

was drained to near empty at its lowest point. There are two booster pumps so it did not take long to restore the tower to full capacity. Technicians are expected to arrive Thursday, July 18, to replace parts that are out-dated.
